

```
import java.util.*;

class Day42 {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        int m = sc.nextInt();

        int[] array1 = new int[n];
        int[] array2 = new int[m];

        System.out.println("Enter the first elements");
        for(int i=0; i<n; i++){
            array1[i] = sc.nextInt();
        }

        System.out.println("Enter the second elements");
        for(int i=0; i<m; i++){
            array2[i] = sc.nextInt();
        }

        boolean areEqual = Arrays.equals(array1, array2);

        if (areEqual) {
            System.out.println("Arrays are the same.");
        } else {
            System.out.println("Arrays are not the same.");
        }
    }
}
```
